Crucible practice permits stirring to be easily done, and this constitutes another reason for the superiority of crucible practice for rolling mill work, and wherever the highest possible quality is required. (d) Slag and dirt on the metal results of course in dirty castings, spills, etc. , and this difficulty is only met with in noncrucible furnaces. It is usually due to faulty design of the furnace resulting in poor application of the heat to the work From the above it would appear that the logical process to use would be the crucible process in some form or other, inasmuch as all the metallurgical requirements are entirely satisfied. Conditions however vary to such a great extent that while the process must fulfill as nearly as possible the metallurgical requirements, it must also adapt itself to various other requirements, chief of which is...
