Excerpt: . . . progression or evolution of moving plasma and electron distributions, one should be able to eliminate some transport processes from the realm of potential flare producing agents. One most easily identified, and perhaps eliminated, is the propagating modes of magnetic reconnection due to the wide range of Alfven speeds within different coronal structures. By proposing such observations to the experimentalists, one must discuss the limitations of the measurements and alternatives which may be offered which address the same problem. The interplay between the theorists and the experimentalists is important in formulating a program for the upcoming maximum. The remainder of this review paper addresses only the contents of the contributed talks and poster papers. The details of each presentation can be found elsewhere in this volume. We only address the global aspect of the session. 2. The Gamma Ray Observatory The Gamma Ray Observatory (GRO) will carry four large instruments whose main objectives are to undertake comprehensive observations of...
