Springer. Paperback. Book Condition: New. Paperback. 292 pages. Dimensions: 9.6in. x 6.7in. x 0.7in. Astatine is - besides radon and francium - the only natural radioelement which only has short-Lived isotopes, thereby excluding experiments with . . weighable amounts of the element. This implies that all available data on physics and chemistry of this element are 12 16 based on experiments on the tracer scale with 10- to 10- g - and this will also not change in future because no longer-Lived isotopes as yet known are to be expected. Due to the fact that the only isotope of At occurring in the natural decay series, ^{219}At , results from the 0. 005 α -branching of ^{223}Fr which itself is produced by the only 1. 38 α -branching of ^{227}Ac - a member of the ^{235}U series - there is no chance to recover substantial amounts of ^{219}At from natural sources for sCientific research of At. All studies, therefore, are being done with the isotopes ^{209}At to ^{211}At having half-lives in the few hours region and being obtained by irradiation of bismuth with α -particles via (α , xn) reactions or by proton irradiation of heavy elements via spallation reactions. The mostly used isotope is 7. 22 h ^{211}At . The fast separation of the obtained At isotopes is no very difficult procedure and is either being done by wet adsorption-precipitation techniques or making use of its high volatility by distilling in air. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
